

How to add a PSC in an entry.

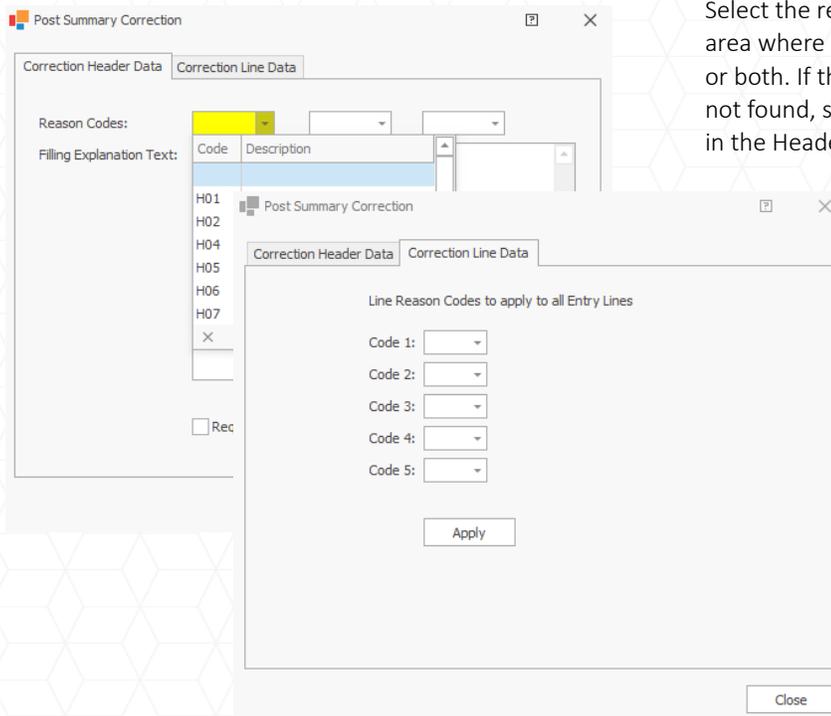

On the entry press the **Edit** button and then activate the PSC indicator from the right side panel. Click the indicator again and a message will prompt if you want to proceed.

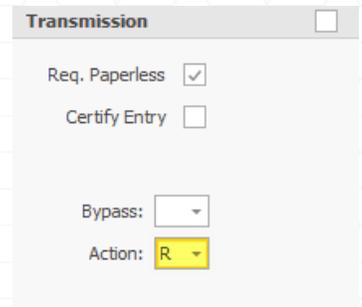

The screenshot shows the main entry form with various fields for entry type, date, and status. A 'Transmission' panel on the right has the 'PSC' indicator checked. A 'Please Confirm' dialog box is overlaid, asking 'Want to take a look at the PSC info?' with 'Yes' and 'No' buttons.

Select the reason code relating the change and the corresponding area where the changes relates to; this is either the **Header, Line** or both. If the change does not correspond to a reason code or if not found, select **H99**. A brief explanation of the change(s) is required in the Header section. Select 'Apply' when finished.

Send transmission as action '**R**' (Replace)

The 'Post Summary Correction' dialog box is shown with two tabs: 'Correction Header Data' and 'Correction Line Data'. The 'Reason Codes' section is highlighted, showing a list of codes (H01-H07) and a description. The 'Correction Line Data' tab is active, showing a table for 'Line Reason Codes to apply to all Entry Lines' with five columns for Code 1 through Code 5. An 'Apply' button is at the bottom.

The 'Transmission' panel is shown with the following settings: 'Req. Paperless' checked, 'Certify Entry' unchecked, 'Bypass' set to a dropdown, and 'Action' set to 'R' (Replace).
